

Metal Roofing & Siding

Premium G-100 Galvanized & Standard AZ-55 Galvalume Colors

36" Wide Coverage • 9" Rib Spacing • 3/4" High Rib

*Only available with Standard Panels
 • Colors available in heavier 26 gauge Galvalume

ABM Panel

What is the difference between Galvalume and Galvanized?

Galvalume is made from bare steel covered with a mixture of zinc, aluminum, and trace amounts of silicon to improve its long-term weathering capabilities. Painted Galvalume is known to exhibit more short-term edge rust and tension bend stains than Galvanized. Galvanized steel is made by passing bare steel through a bath of molten zinc at 842 degrees Fahrenheit. The zinc coating that gives the steel sheet its resistance to weathering and rust, offers better cathodic or sacrificial protection for scratches and cut edges.

IMPORTANT: Galvanized steel is known to resist ammonia better than Galvalume. That is why we strongly recommended Galvanized Steel in the presence of vapors from animal confinement.

Colors are as close as possible to actual colors, but may vary slightly from actual metal. Please request a free metal sample.
